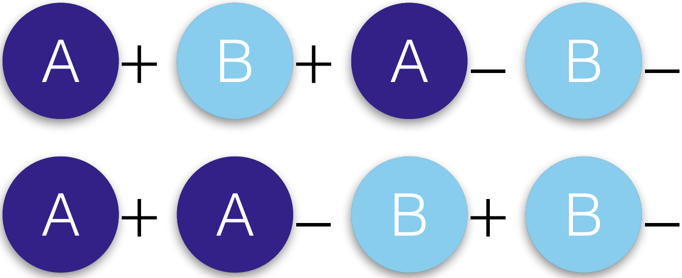
There are restrictions we want to keep

37

```
def update(account: cown[Account], amount: int) {
  when(account) { A
    if(account.balance + amount > 0) {
      account.balance += amount
      val id = account.id()
      when(log) { B log.record(id, amount) }
} } }
```

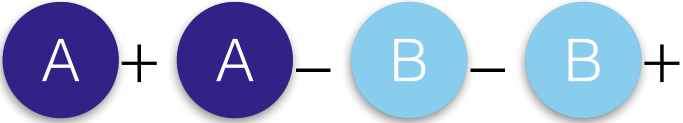
Permitted

upd(+-),log(+-)

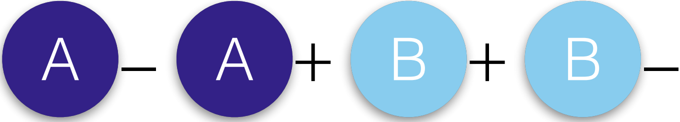


Order

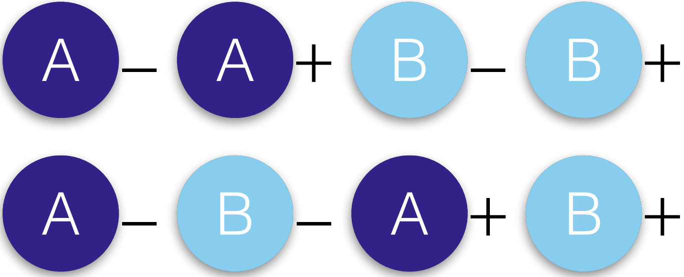
`upd(+-),log(-+)`

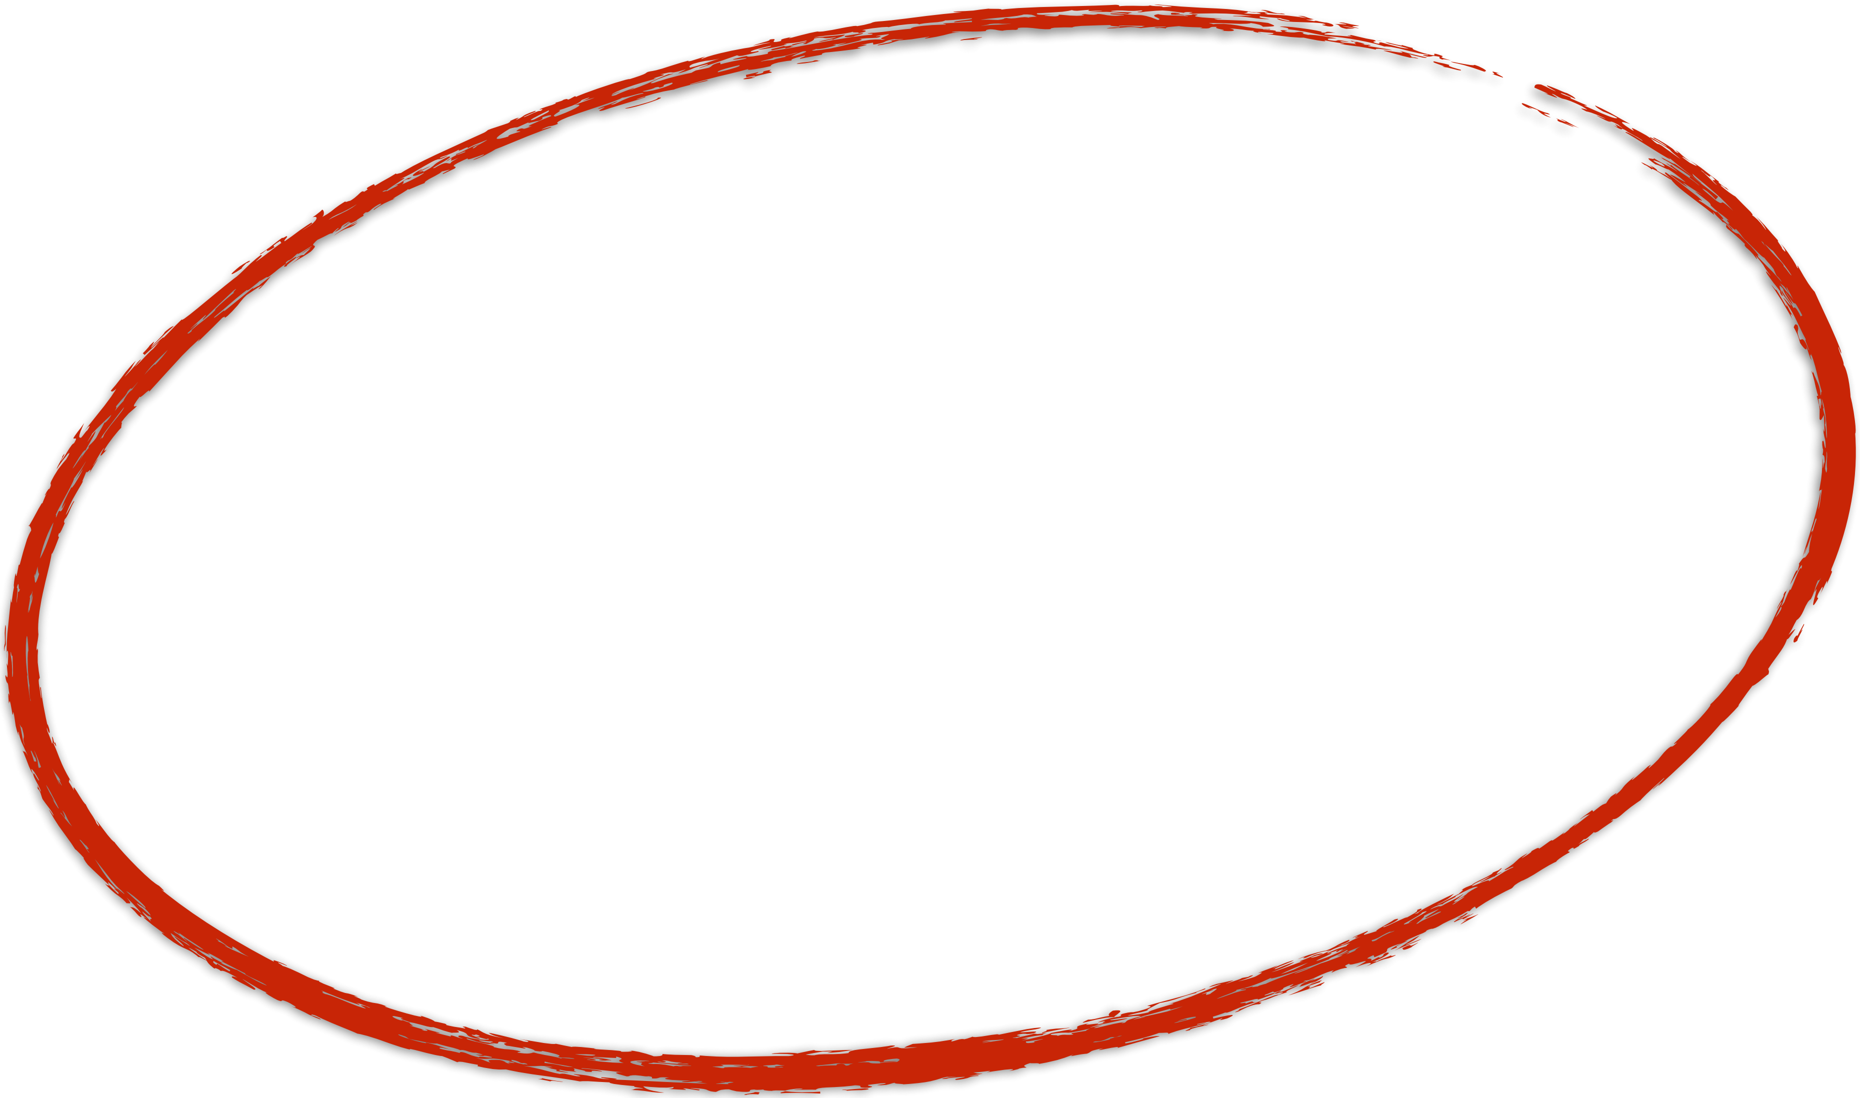


`upd(-+),log(+-)`



`upd(-+),log(-+)`





In this case, the semantics provide the appropriate restrictions.
