

There are restrictions we want to keep

3

7

```
def update(account: cown[Account], amount: int) {  
  when(account) { A  
    if(account.balance + amount > 0) {  
      account.balance += amount  
      val id = account.id()  
      when(log) { B log.record(id, amount) }  
    } } }  
}
```

Permitted

upd(+ -), log(+ -)

order

$\text{upd}(+-), \log(-+)$

$\text{upd}(-+), \text{log}(+-)$

upd(-+), log(-+)

In this case, the semantics provide the appropriate restrictions.
