

```
when(dst) {  dst.balance += 10; }
```

when(src) {  src.balance += 10; }

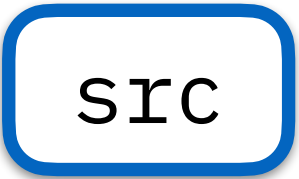

What should this program be able to do?

3

6

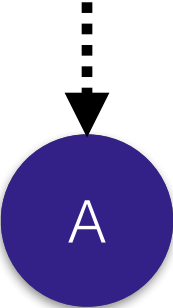

```
when(dst) {  print(dst.balance) }
```

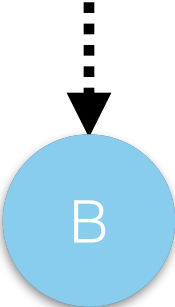

How can this program execute?

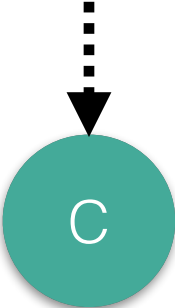

src

dst

```
when(src) {  print(src.balance) }
```

Is it possible for  then  ?

./proram

src=10,

dst = 10

```
> ./program
```

```
> src=10, dst=10
```

`dst.balances += 10;`

when(odst)

B

when (src) {

`src.balance += 10;`

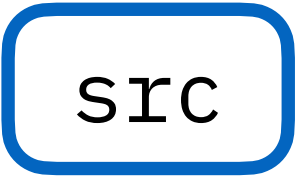

A

```
print(dst.balance)
```

when(odst) is

A large teal circle with a white capital letter 'C' in the center.

C

src

dst

when(sirc) ~

```
print(src.bailance)]
```

D

Is it possible for

then

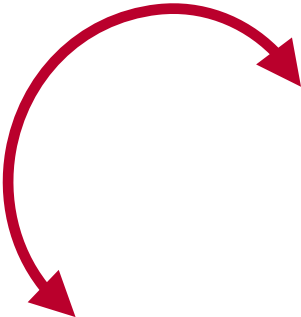

D

A

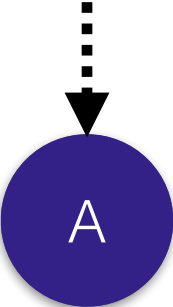

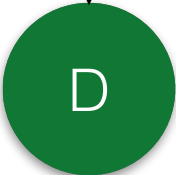

> src≡10, dst≡10

> src=0, dst=10

when(sirc) }

```
print(src.bailance)]
```

D
