

But some orders are the point!

```
def update(account: cown[Account], amount: int) {  
  → when(account) { A  
    account.balance += amount  
    val id = account.id()  
    when(log) { B log.record(id, amount) }  
  }  
}
```

update(src, +100)

update(src, -100)

X Intentionally disallowed

Concurrent updates and logs should agree on the order things happened

But some orders are the point!

```
def update(account: cown[Account], amount: int) {  
  when(account) { A  
    account.balance += amount  
    val id = account.id()  
    when(log) { B log.record(id, amount) }  
} }
```

Order

Permitted
