

when(odstest)

```
def main(src: Account, dst: Account) {
```

when(sirc) }

src:balance+=10; }

$\text{dst}.\text{frozen} \equiv \text{true};$

A

B

What is BoC?

```
src.balance += 10;
```

A

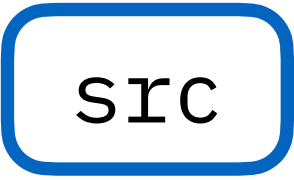

when parents and children are not the same as it requires

Spawning is synchrous but executing is asynchrous

balance: 0

frozen: false

src

balance: 0

frozen: false

dst
