

Why does this matter?

Can we transform BoC programs?

```
when(dst) {  print(dst.balance) }
```

```
when(src) {  src.balance += 10; }
```

```
when(src) {  print(src.balance) }
```

```
when(dst) {  dst.balance += 10; }
```

```
when(src) {  src.open(); }
```

when(odst) is

```
print(dst.bailance)
```

A large teal circle with a white capital letter 'C' in the center.

C

when(src) {

`src:balance+=10;`

A

```
print(src.balance)
```

when (sirc) }

A large green circle with a white outline. Inside the circle, centered, is a white capital letter 'D'.

D

`dst.balance += 10;`

when(odst)

B

`src.open();`

when(sinc)

E

35

35

when(odst) is

```
print(dst.balance) }
```

A large teal circle with a white capital letter 'C' in the center.

C

```
print(src.blance)
```

when(src) {

D
