

Why does this matter?

3

6

```
when(dst) {  print(dst.balance) }
```

when(src) {  src.balance += 10; }

```
when(dst) {  dst.balance += 10; }
```

when(src) {  src.open();

 print(src.balance) }

Don't apply this program transformation if we use the operation as the specification

Can we transform BoC programs?

Why does this matter?

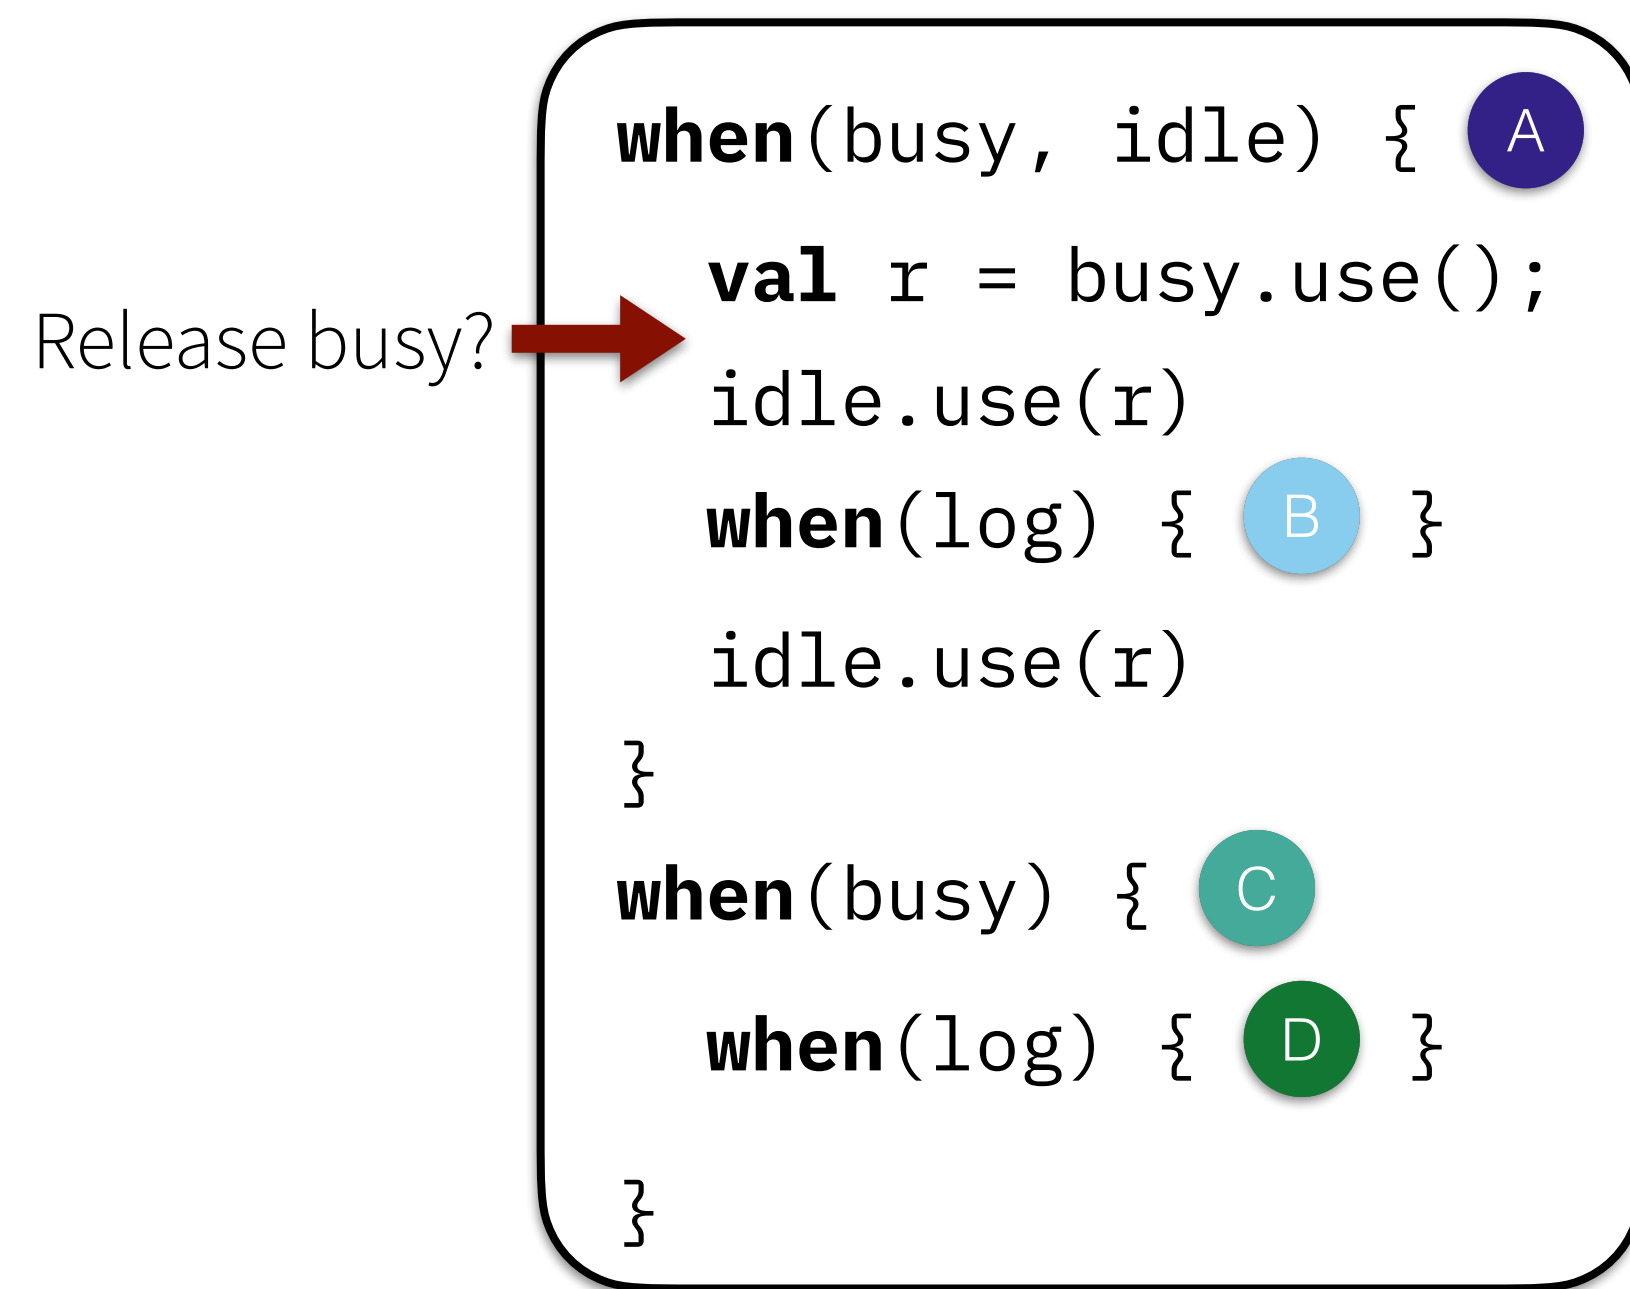

Can we transform BoC programs?

```
when(src) { A src.balance += 10; }  
when(dst) { B dst.balance += 10; }
```

```
when(src) { E src.open();  
           D print(src.balance) }  
when(dst) { C print(dst.balance) }
```

We can't apply this program transformation if we use the operational semantics ordering as the specification 

Why does this matter?

Can we release cows that are highly contended?
