

What does this get us?

5

6

```
when(popular, free) {
```

```
    val r = popular.use();
```

```
    free.use(r)
```

```
when(log) {
```

```
}
```

```
    free.use(r)
```

```
}
```

when(src) {  E

when(dst) {  F }

}

when(dst) {  G }

when(dst) {  }

when(src) {  }

when(dst) {  }

}

**Can another behaviour start using a cown
before a behaviour finishes?**

Can we render behavior?

After the last behaviour

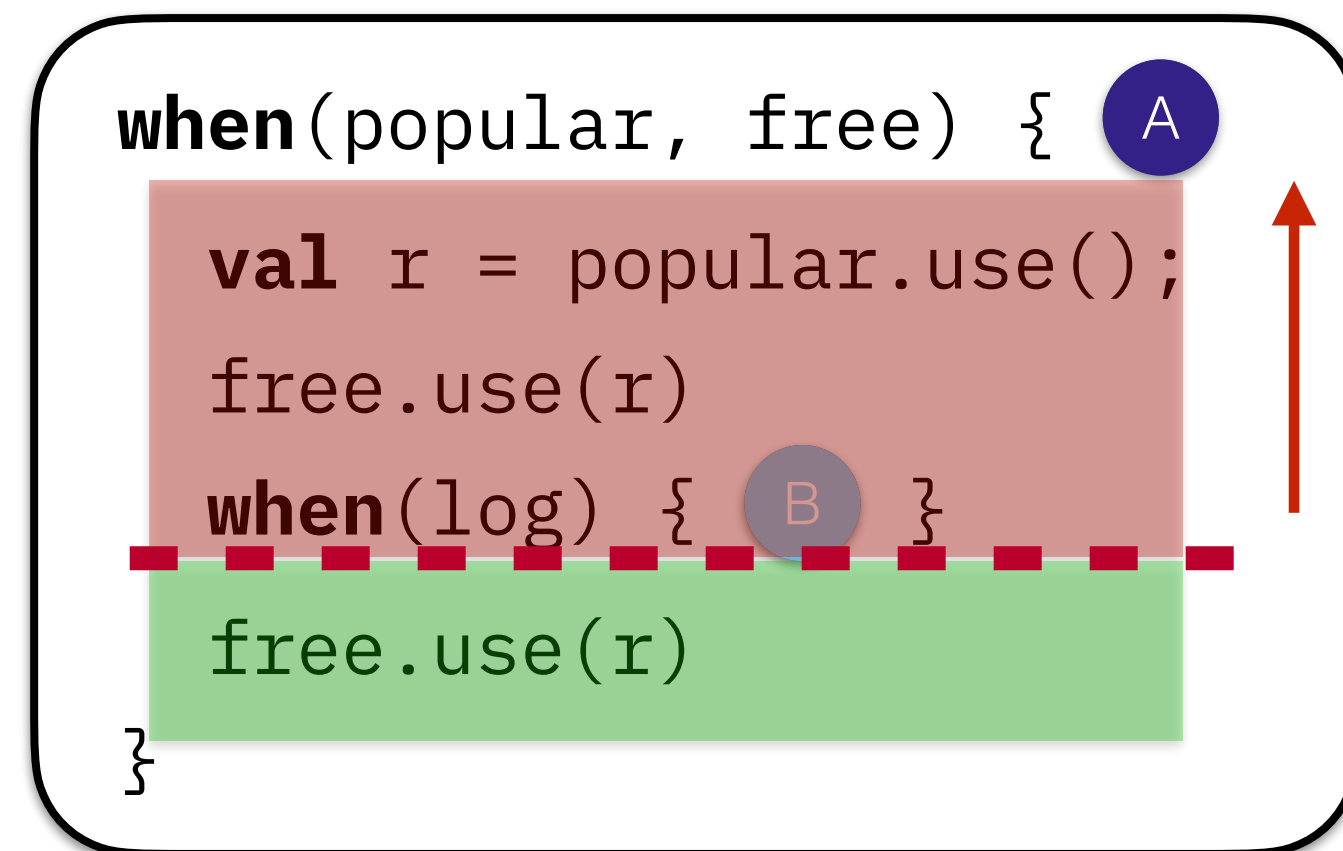

We can read about program transformation

As long as we aren't violating causality

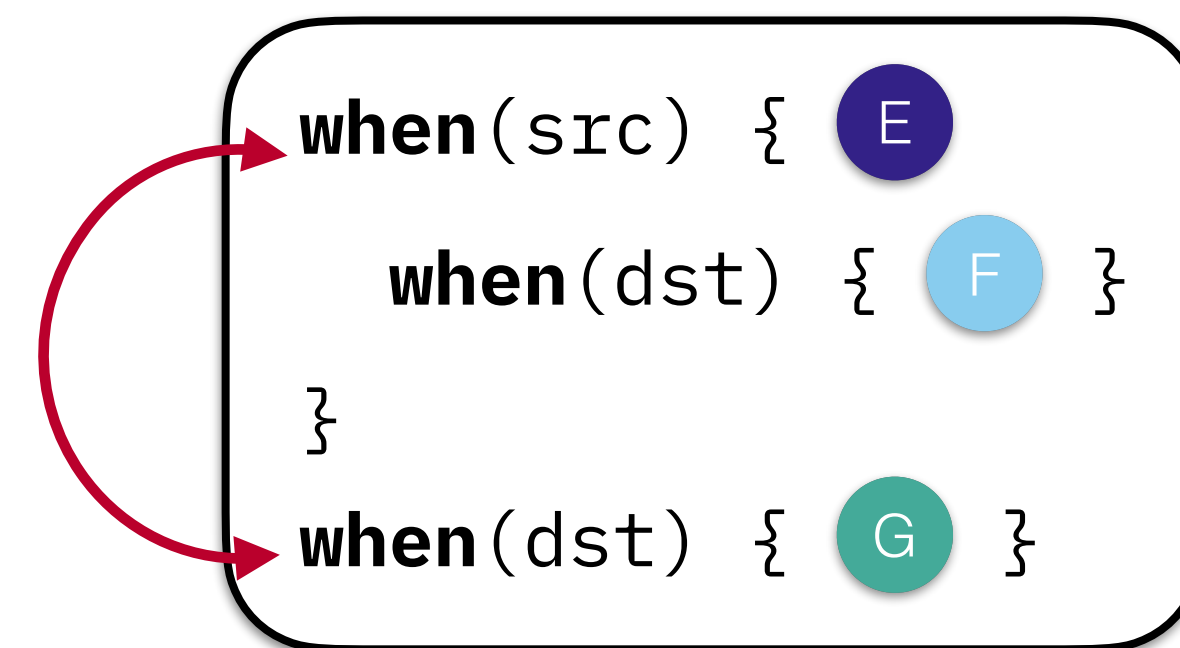

What does this get us?

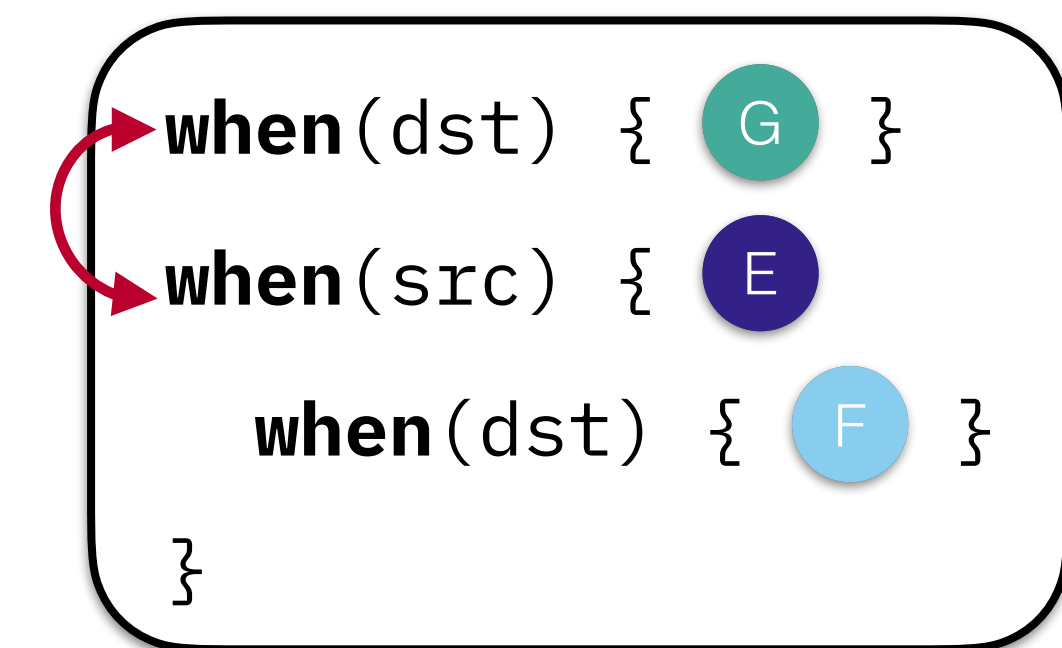

Can another behaviour start using a cow
before a behaviour finishes?

After the last behaviour spawn

Can we reorder behaviours?

As long as we aren't violating causality

We can reason about program transformations

Future and Conclusion
